## Introduction

- Thank you for inviting me to speak at the Kansas MAA Section Meeting.

## Introduction

- Thank you for inviting me to speak at the Kansas MAA Section Meeting.
- I have given a talk once before at the Kansas MAA Section Meeting. It was a joint talk with Robert E. Kennedy (UCM) in 1987 at Washburn University.

## Introduction

- Thank you for inviting me to speak at the Kansas MAA Section Meeting.
- I have given a talk once before at the Kansas MAA Section Meeting. It was a joint talk with Robert E. Kennedy (UCM) in 1987 at Washburn University.
- The title of the talk was:

On Using a Corollary to Chebyshev's Inequality for the Investigation of Natural Density

## Introduction cont.

- The talk was scheduled for Saturday, March 28 in the Contributed Papers section at the 1:30 pm time slot in LC 103.

## Introduction cont.

- The talk was scheduled for Saturday, March 28 in the Contributed Papers section at the 1:30 pm time slot in LC 103.
- Gary Schmidt from Washburn University was presiding over the session. No one attended our talk except Bob, Gary, and me.

## Introduction cont.

- The talk was scheduled for Saturday, March 28 in the Contributed Papers section at the 1:30 pm time slot in LC 103.
- Gary Schmidt from Washburn University was presiding over the session. No one attended our talk except Bob, Gary, and me.
- We did not give our talk. However, I did put the talk on my curriculum vita.

## History of Niven Numbers

- In 1977, Robert Kennedy attended the 5th Annual Mathematics Conference at Miami University in Oxford, OH .

## History of Niven Numbers

- In 1977, Robert Kennedy attended the 5th Annual Mathematics Conference at Miami University in Oxford, OH .
- The conference theme was Number Theory and the Buckingham Scholar for the conference was Ivan Niven.

Ivan Niven

## History of Niven Numbers cont.

- Professor Niven mentioned a question which appeared in the children's page of a newspaper. The question was:

Find a whole number which is twice the sum of its digits.

## History of Niven Numbers cont.

- Professor Niven mentioned a question which appeared in the children's page of a newspaper. The question was:

Find a whole number which is twice the sum of its digits.

- The answer to his question is 18 , since the sum of the decimal digits of 18 is 9 and 18 is 2 times 9 .

## History of Niven Numbers cont.

- My colleague, Bob Kennedy, was so inspired by Ivan Niven that he made the following definition in honor of Dr. Niven.

## Definition (Niven Number)

A positive integer is a Niven number if it is divisible by the sum of its decimal digits.

## History of Niven Numbers cont.

- My colleague, Bob Kennedy, was so inspired by Ivan Niven that he made the following definition in honor of Dr. Niven.

## Definition (Niven Number)

A positive integer is a Niven number if it is divisible by the sum of its decimal digits.

- Hence, the birth of Niven numbers.

## Examples of Niven Numbers

- 18 is a Niven number.

Curtis Cooper University of Central Missouri
Niven Numbers and Sudoku Puzzles

## Examples of Niven Numbers

- 18 is a Niven number.
- Some other examples of Niven numbers are:

$$
1-10,12,20,21,1729, \text { and } 4050
$$

## Examples of Niven Numbers

- 18 is a Niven number.
- Some other examples of Niven numbers are:

$$
1-10,12,20,21,1729, \text { and } 4050
$$

The Niven numbers less than or equal to 200 are:

$$
\begin{aligned}
& 1,2,3,4,5,6,7,8,9,10,12,18,20,21,24, \\
& 27,30,36,40,42,45,48,50,54,60,63,70,72, \\
& 80,81,84,90,100,102,108,110,111,112,114,117, \\
& 120,126,132,133,135,140,144,150,152,153,156, \\
& 162,171,180,190,192,195,198,200, \ldots
\end{aligned}
$$

## Niven Number Facts

## Niven Number Facts.

## Niven Number Facts.

- 1. Any number with digital sum 3 is a Niven number.
- 2. Any number with digital sum 9 is Niven.
- 3. An even number with digital sum 2 is Niven.

## Definition of $s(n)$

To study Niven numbers, we require the following definition.

## Definition

Let $n$ be a nonnegative integer. Let $s(n)$ denote the sum of the base 10 digits of $n$.

## Definition of $s(n)$

To study Niven numbers, we require the following definition.

## Definition

Let $n$ be a nonnegative integer. Let $s(n)$ denote the sum of the base 10 digits of $n$.

- For example,

$$
s(10)=1, s(23)=5, s(1729)=19, \text { and } s(123456789)=45
$$

## Definition of $s(n)$

To study Niven numbers, we require the following definition.

## Definition

Let $n$ be a nonnegative integer. Let $s(n)$ denote the sum of the base 10 digits of $n$.

- For example,

$$
s(10)=1, s(23)=5, s(1729)=19, \text { and } s(123456789)=45
$$

- Let us investigate whether or not $n$ ! is Niven for any positive integer $n$.

## Table of Factorials and Digital Sums

Here is a table of $n, n!$, and $s(n!)$

| $n$ | $n!$ | $s(n!)$ |
| :--- | :--- | :--- |
| 1 | 1 | 1 |
| 2 | 2 | 2 |
| 3 | 6 | 6 |
| 4 | 24 | 6 |
| 5 | 120 | 3 |
| 6 | 720 | 9 |
| 7 | 5040 | 9 |
| 8 | 40320 | 9 |
| 9 | 362880 | 27 |
| 10 | 3628800 | 27 |

## Table of Factorials and Digital Sums cont.

Here is a table of $n, n!$, and $s(n!)$

| $n$ | $n!$ | $s(n!)$ |
| :--- | :--- | :--- |
| 11 | 39916800 | 36 |
| 12 | 479001600 | 27 |
| 13 | 6227020800 | 27 |
| 14 | 87178291200 | 45 |
| 15 | 1307674368000 | 45 |
| 16 | 20922789888000 | 63 |
| 17 | 355687428096000 | 63 |
| 18 | 6402373705728000 | 54 |
| 19 | 121645100408832000 | 45 |

## Number of Niven Numbers

- Question. How many Niven numbers are there?

## Number of Niven Numbers

- Question. How many Niven numbers are there?
- The set of Niven numbers is infinite since any positive integral power of 10 is a Niven number.

## Number of Niven Numbers

- Question. How many Niven numbers are there?
- The set of Niven numbers is infinite since any positive integral power of 10 is a Niven number.

## Definition

Let $x$ be a real number and $N(x)$ be the number of Niven numbers $\leq x$.

## Number of Niven Numbers

- Question. How many Niven numbers are there?
- The set of Niven numbers is infinite since any positive integral power of 10 is a Niven number.

## Definition

Let $x$ be a real number and $N(x)$ be the number of Niven numbers $\leq x$.

Here is a table of $x$ and $N(x)$.

| $x$ | 1 | 10 | 100 | 1000 | $10^{4}$ | $10^{5}$ | $10^{6}$ | $10^{7}$ |
| :--- | :--- | :--- | :--- | :--- | :--- | :--- | :--- | :--- |
| $N(x)$ | 1 | 10 | 33 | 213 | 1538 | 11872 | 95428 | 806095 |

## Natural Density of Niven Numbers

- In 1984, Cooper and Kennedy showed that the natural density of the Niven numbers is zero. That is,

## Theorem

$$
\lim _{x \rightarrow \infty} \frac{N(x)}{x}=0
$$

## Natural Density of Niven Numbers

- In 1984, Cooper and Kennedy showed that the natural density of the Niven numbers is zero. That is,

## Theorem

$$
\lim _{x \rightarrow \infty} \frac{N(x)}{x}=0
$$

- The proof of the theorem relied on Chebyshev's inequality and the following lemma.

## Statistics of Digital Sums

## Lemma

Let $n$ be a positive integer and consider the set

$$
S=\left\{s(0), s(1), s(2), \ldots, s\left(10^{n}-1\right)\right\}
$$

Then the mean and standard deviation of $s(n)$ over the set $S$ is

$$
\mu=4.5 n \text { and } \sigma=\sqrt{8.25 n}
$$

## Proof of Lemma

- The lemma can be proved by considering a random experiment consisting of throwing $n$ ten-faced dice, where each of the ten faces is marked with one of the numbers 0 , $1,2, \ldots, 9$. The sample space associated with this experiment consists of $10^{n}$ points

$$
\left\{\left(x_{1}, x_{2}, \ldots, x_{n}\right) \mid 0 \leq x_{i} \leq 9\right\}
$$

## Proof of Lemma

- The lemma can be proved by considering a random experiment consisting of throwing $n$ ten-faced dice, where each of the ten faces is marked with one of the numbers 0 , $1,2, \ldots, 9$. The sample space associated with this experiment consists of $10^{n}$ points

$$
\left\{\left(x_{1}, x_{2}, \ldots, x_{n}\right) \mid 0 \leq x_{i} \leq 9\right\}
$$

- Each outcome represents the digits of a number in the interval $0 \leq x<10^{n}$.

## Proof of Lemma cont.

$$
\frac{1}{10^{n}} \sum_{x=0}^{10^{n}-1} s(x)=\mu=\mathrm{E}\left(x_{1}+x_{2}+\cdots+x_{n}\right)=n \mathrm{E}\left(x_{1}\right)
$$

and

$$
\frac{1}{10^{n}} \sum_{x=0}^{10^{n}-1}(s(x)-\mu)^{2}=\sigma^{2}=\operatorname{Var}\left(x_{1}+x_{2}+\cdots+x_{n}\right)=n \operatorname{Var}\left(x_{1}\right)
$$

## Proof of Lemma cont.

- But,

$$
\mathrm{E}\left(x_{1}\right)=\frac{1}{10}(0+1+2+\cdots+9)=4.5
$$

and

$$
\begin{aligned}
\operatorname{Var}\left(x_{1}\right) & =\mathrm{E}\left(x_{1}^{2}\right)-\left(\mathrm{E}\left(x_{1}\right)\right)^{2} \\
& =\frac{1}{10}\left(0^{2}+1^{2}+2^{2}+\cdots+9^{2}\right)-(4.5)^{2}=8.25
\end{aligned}
$$

## Proof of Lemma cont.

- But,

$$
\mathrm{E}\left(x_{1}\right)=\frac{1}{10}(0+1+2+\cdots+9)=4.5
$$

and

$$
\begin{aligned}
\operatorname{Var}\left(x_{1}\right) & =\mathrm{E}\left(x_{1}^{2}\right)-\left(\mathrm{E}\left(x_{1}\right)\right)^{2} \\
& =\frac{1}{10}\left(0^{2}+1^{2}+2^{2}+\cdots+9^{2}\right)-(4.5)^{2}=8.25
\end{aligned}
$$

- Therefore,

$$
\mu=4.5 n \text { and } \sigma=\sqrt{8.25 n}
$$

## Lower and Upper Bounds of Niven Numbers

- In 2003, DeKoninck and Doyon found upper and lower bounds for $N(x)$.

## Lower and Upper Bounds of Niven Numbers

- In 2003, DeKoninck and Doyon found upper and lower bounds for $N(x)$.

## Theorem

Let $\epsilon>0$ be given. Then

$$
x^{1-\epsilon} \ll N(x) \ll \frac{x \log \log x}{\log x}
$$

## Lower and Upper Bounds of Niven Numbers

- In 2003, DeKoninck and Doyon found upper and lower bounds for $N(x)$.

## Theorem

Let $\epsilon>0$ be given. Then

$$
x^{1-\epsilon} \ll N(x) \ll \frac{x \log \log x}{\log x}
$$

- That is, given any $\epsilon>0$, there exists a positive real number $x_{0}=x_{0}(\epsilon)$ such that

$$
N(x)>x^{1-\epsilon} \text { for all } x \geq x_{0} .
$$

## Heuristic Asymptotic Formula for Niven Numbers

- DeKoninck and Doyon also gave a heuristic argument which would lead to an asymptotic formula for $N(x)$.

## Heuristic Asymptotic Formula for Niven Numbers

- DeKoninck and Doyon also gave a heuristic argument which would lead to an asymptotic formula for $N(x)$.
- That is,

$$
N(x) \sim c \frac{x}{\log x},
$$

where

$$
c=\frac{14}{27} \log 10
$$

## Heuristic Asymptotic Formula for Niven Numbers

- DeKoninck and Doyon also gave a heuristic argument which would lead to an asymptotic formula for $N(x)$.
- That is,

$$
N(x) \sim c \frac{x}{\log x},
$$

where

$$
c=\frac{14}{27} \log 10
$$

- Here, $f(x) \sim g(x)$ means that

$$
\lim _{x \rightarrow \infty} \frac{f(x)}{g(x)}=1

## Consecutive Niven Numbers

- Question. How many consecutive Niven numbers are possible?

Curtis Cooper University of Central Missouri
Niven Numbers and Sudoku Puzzles

## Consecutive Niven Numbers

- Question. How many consecutive Niven numbers are possible?
- It is not difficult to find sequences of consecutive Niven numbers. For example,

$$
1,2,3,4,5,6,7,8,9,10
$$

is an example of 10 consecutive Niven numbers.

## Consecutive Niven Numbers

- Question. How many consecutive Niven numbers are possible?
- It is not difficult to find sequences of consecutive Niven numbers. For example,

$$
1,2,3,4,5,6,7,8,9,10
$$

is an example of 10 consecutive Niven numbers.

- Sequences of 3 and 5 consecutive Niven numbers are

$$
\begin{aligned}
& \text { 110, 111, 112; and } \\
& 131052,131053,131054,131055,131056 \text {; respectively. }
\end{aligned}
$$

## Consecutive Niven Numbers

To discuss consecutive Niven numbers, we introduce the idea of a decade and a century of numbers.

## Consecutive Niven Numbers

To discuss consecutive Niven numbers, we introduce the idea of a decade and a century of numbers.

## Definition

Let $n$ be a nonnegative integer. A decade is a set of numbers

$$
\{10 n, 10 n+1, \ldots, 10 n+9\}
$$

and a century is a set of numbers

$$
\{100 n, 100 n+1, \ldots, 100 n+99\} .
$$

## Consecutive Niven Numbers

- We first observe that in a given decade, either all the odd numbers have an even digital sum or all the odd numbers have an odd digital sum.

## Consecutive Niven Numbers

- We first observe that in a given decade, either all the odd numbers have an even digital sum or all the odd numbers have an odd digital sum.
- To make another observation, we need the following definition.

## Consecutive Niven Numbers

- We first observe that in a given decade, either all the odd numbers have an even digital sum or all the odd numbers have an odd digital sum.
- To make another observation, we need the following definition.

## Definition

Let E denote the statement "odd numbers which have an even digital sum" and O denote the statement "odd numbers which have an odd digital sum."

## Consecutive Niven Numbers

- We first observe that in a given decade, either all the odd numbers have an even digital sum or all the odd numbers have an odd digital sum.
- To make another observation, we need the following definition.

## Definition

Let E denote the statement "odd numbers which have an even digital sum" and O denote the statement "odd numbers which have an odd digital sum."

- Note that the ten decades in a century alternate either

$$
\mathrm{O}, \mathrm{E}, \mathrm{O}, \mathrm{E}, \mathrm{O}, \mathrm{E}, \mathrm{O}, \mathrm{E}, \mathrm{O}, \mathrm{E} \text { or } \mathrm{E}, \mathrm{O}, \mathrm{E}, \mathrm{O}, \mathrm{E}, \mathrm{O}, \mathrm{E}, \mathrm{O}, \mathrm{E}, \mathrm{O} .
$$

## Consecutive Niven Numbers

- Finally, note that in an E decade, none of the odd numbers can be Niven since their digital sum is even.

## Consecutive Niven Numbers

- Finally, note that in an E decade, none of the odd numbers can be Niven since their digital sum is even.
- Thus, the only way to get more than 11 consecutive Niven numbers is to cross a century boundary where the decades between centuries would be

$$
\ldots, \mathrm{E}, \mathrm{O}, \mathrm{E}, \mathrm{O} \mid \mathrm{O}, \mathrm{E}, \mathrm{O}, \mathrm{E}, \ldots .
$$

## Consecutive Niven Numbers

- Hence, we cannot have more than 21 consecutive Niven numbers and if a list of 21 consecutive Niven numbers exists, it would have to begin with an even Niven number of the form

$$
n \cdot 10^{2}+90
$$

where $n$ is a nonnegative integer.

## Consecutive Niven Numbers

- Hence, we cannot have more than 21 consecutive Niven numbers and if a list of 21 consecutive Niven numbers exists, it would have to begin with an even Niven number of the form

$$
n \cdot 10^{2}+90
$$

where $n$ is a nonnegative integer.

- For example,

$$
2390,2391, \ldots, 2399,2400,2401, \ldots, 2409,2410
$$

would be a possible example.

## Consecutive Niven Numbers

- We will denote $n_{r}$ as the concatenation of $r n$ 's in its decimal representation.

## Consecutive Niven Numbers

- We will denote $n_{r}$ as the concatenation of $r n$ 's in its decimal representation.
- In 1993, Cooper and Kennedy stated and proved the following theorem.

## Family of Consecutive Niven Numbers

## Theorem

Let $m$ be a nonnegative integer and let
$a=4090669070187777592348077471447408839621564801$ 2007115516094806249015486761744582584646124234 1540855543641742325745294115007591954820126570 $087071005523266064292043054902370439430_{1120}$ and
$b=2846362190166818204716429619770154544233311863$ 4187301827478422658543387589306681088151446703 2759507916140833155837906335537198825206802774 $84302831497550209729274595593605923621569_{1119} 0$.

## Family of Consecutive Niven Numbers

## Theorem

Finally, let

$$
x=a_{3423103} 0_{m} b
$$

Then

$$
x, x+1, x+2, \ldots, x+19
$$

is a sequence of 20 consecutive Niven numbers.

Curtis Cooper University of Central Missouri
Niven Numbers and Sudoku Puzzles

## Theorem on Consecutive Niven Numbers

- Then we proved the following theorem.

## Theorem

There does not exist a sequence of 21 consecutive Niven numbers.

## b-Niven Numbers

## Definition

Let $b \geq 2$ be an integer. A $b$-Niven number is a positive integer which is divisible by the sum of its base $b$ digits.

## b-Niven Numbers

## Definition

Let $b \geq 2$ be an integer. A $b$-Niven number is a positive integer which is divisible by the sum of its base $b$ digits.

- In 1994, Grundman extended the Cooper and Kennedy result to show that for bases $b \geq 2$, there are $2 b$ but not $2 b+1$ consecutive $b$-Niven numbers.Introduction}Niven BasicsHow Many?

8 Alternating Cycle

Curtis Cooper University of Central Missouri
Niven Numbers and Sudoku Puzzles

## Niven Repunits

Next, we studied Niven repunits.

## Definition

Let $n$ be a positive integer. Then $1_{n}$ is a repunit.

- Question. Find a characterization of Niven repunits.

## Niven Repunits

Next, we studied Niven repunits.

## Definition

Let $n$ be a positive integer. Then $1_{n}$ is a repunit.

- Question. Find a characterization of Niven repunits.
- The first four Niven repunits are

$$
1,111,111111111, \text { and } 1_{27} .
$$

## Characterization of Niven Repunits

## Theorem

Let $n$ and 10 be relatively prime. Denote the order of 10 $(\bmod n)$ by $e_{n}(10)$. Then the following statements are equivalent.
(1) $1_{n}$ is a Niven repunit.
(2) $10^{n} \equiv 1(\bmod n)$.
(3) $n \equiv 0\left(\bmod e_{n}(10)\right)$.
(4) $n \equiv 0\left(\bmod e_{p}(10)\right)$ for each prime factor $p$ of $n$.

## Generating Niven Repunits

- For every nonnegative integer $t, 1_{3 t}$ is a Niven repunit. This follows from the fact that $e_{3}(10)=1$ and statement (4) of the theorem.

## Generating Niven Repunits

- For every nonnegative integer $t, 1_{3^{t}}$ is a Niven repunit. This follows from the fact that $e_{3}(10)=1$ and statement (4) of the theorem.
- Using statement (4) of the theorem, we can construct all $n$ such that $1_{n}$ is Niven by determining which primes $p$ are such that every prime factor of $e_{p}(10)$ also satisfies the condition of statement (4).

## Generating Niven Repunits

- For every nonnegative integer $t, 1_{3^{t}}$ is a Niven repunit. This follows from the fact that $e_{3}(10)=1$ and statement (4) of the theorem.
- Using statement (4) of the theorem, we can construct all $n$ such that $1_{n}$ is Niven by determining which primes $p$ are such that every prime factor of $e_{p}(10)$ also satisfies the condition of statement (4).
- Since $e_{7}(10)=6$ has a factor of 2 , it follows that no multiple of 7 can satisfy statement (4). That is, $1_{7 m}$ can never be a Niven repunit.

## Generating Niven Repunits

- The first prime larger than 3 that can be a factor of an $n$ that satisfies statement (4) is 37 . This follows because $e_{37}(10)=3$ and, as stated above, 3 is a prime that must be a factor of every $n$ that satisfies statement (4) of the theorem.

## Generating Niven Repunits

- The first prime larger than 3 that can be a factor of an $n$ that satisfies statement (4) is 37 . This follows because $e_{37}(10)=3$ and, as stated above, 3 is a prime that must be a factor of every $n$ that satisfies statement (4) of the theorem.
- The next two primes, after 37, which could possibly be factors of an $n$ such that $1_{n}$ is Niven are 163 and 757 since

$$
e_{163}(10)=3^{4} \text { and } e_{757}(10)=3^{3}
$$

## Generating Niven Repunits

- The first prime larger than 3 that can be a factor of an $n$ that satisfies statement (4) is 37 . This follows because $e_{37}(10)=3$ and, as stated above, 3 is a prime that must be a factor of every $n$ that satisfies statement (4) of the theorem.
- The next two primes, after 37, which could possibly be factors of an $n$ such that $1_{n}$ is Niven are 163 and 757 since

$$
e_{163}(10)=3^{4} \text { and } e_{757}(10)=3^{3}
$$

- The first column in the following table gives all primes, less than 50000, which could possibly be factors of an $n$ that satisfies statement (4).

## Table of Niven Repunits

| prime $p$ | $e_{p}(10)$ |
| ---: | :--- |
| 3 | 1 |
| 37 | 3 |
| 163 | $81=3^{4}$ |
| 757 | $27=3^{3}$ |
| 1999 | $999=\left(3^{3}\right)(37)$ |
| 5477 | $1369=37^{2}$ |
| 8803 | $1467=\left(3^{2}\right)(163)$ |
| 9397 | $81=3^{4}$ |
| 13627 | $6813=\left(3^{2}\right)(757)$ |
| 15649 | $489=(3)(163)$ |
| 36187 | $18093=(3)(37)(163)$ |
| 40879 | 757 |

## Generators of Niven Repunits

The following table gives a list of generators of Niven repunits.

| 3 |
| :---: |
| $(3)(37)$ |
| $\left(3^{4}\right)(163)$ |
| $\left(3^{3}\right)(757)$ |
| $\left(3^{3}\right)(37)(1999)$ |
| $(3)\left(37^{2}\right)(5477)$ |
| $\left(3^{4}\right)(163)(8803)$ |
| $\left(3^{4}\right)(9397)$ |
| $\left(3^{3}\right)(757)(13627)$ |
| $(3)(163)(15649)$ |

## Generators of Niven Repunits

- The phrase, ". . . generators of Niven repunits . . ." is used because
increasing the exponents of any of the prime factors of the least common multiple of any collection chosen from the list given in the table above will be an $n$ such that $1_{n}$ is a Niven repunit.

## Generators of Niven Repunits

- The phrase, ". . . generators of Niven repunits . . ." is used because
increasing the exponents of any of the prime factors of the least common multiple of any collection chosen from the list given in the table above will be an $n$ such that $1_{n}$ is a Niven repunit.
- For example,

$$
\begin{aligned}
& \text { lcm }\left(\left(3^{4}\right)(163),\left(3^{3}\right)(757),\left(3^{3}\right)(757)(13627)\right) \\
& =\left(3^{4}\right)(163)(757)(13627)
\end{aligned}
$$

- So,

$$
3_{n_{1}} 163_{n_{2}} 757_{n_{3}} 13627_{n_{4}}
$$

will be a Niven repunit for any $n_{1} \geq 4, n_{2} \geq 1, n_{3} \geq 1$, and
$n_{4}>1$.

## Sudoku Terminology

- A puzzle is considered valid if it can be solved uniquely.

## Sudoku Terminology

- A puzzle is considered valid if it can be solved uniquely.
- We also want to consider a well-constructed puzzle to be minimal, that is, removal of any clue results in multiple solutions.

## Sudoku Terminology

- A puzzle is considered valid if it can be solved uniquely.
- We also want to consider a well-constructed puzzle to be minimal, that is, removal of any clue results in multiple solutions.
- We shall study the structure and properties of Sudoku puzzles and establish some strategies for solving puzzles deterministically, i.e., without trial-and-error.

## Sudoku Terminology

- We consider each row of nine cells as a row block, each column of nine cells as a column block, and each of the nine $3 \times 3$ cells as a square block.

## Sudoku Terminology

- We consider each row of nine cells as a row block, each column of nine cells as a column block, and each of the nine $3 \times 3$ cells as a square block.
- There are nine blocks of each type.

## Sudoku Terminology

- We consider each row of nine cells as a row block, each column of nine cells as a column block, and each of the nine $3 \times 3$ cells as a square block.
- There are nine blocks of each type.
- Now, we may also consider every cell to be at the intersection of a row block, a column block, and a square block.

## Sudoku Terminology

- We number the nine row blocks from top to bottom as

$$
R_{1}, R_{2}, \ldots, R_{9}
$$

the nine column blocks from left to right as

$$
C_{1}, C_{2}, \ldots, C_{9}
$$

and the nine square blocks in row-major order as

$$
S_{1}, S_{2}, \ldots, S_{9}
$$

## Sudoku Terminology

- We number the nine row blocks from top to bottom as

$$
R_{1}, R_{2}, \ldots, R_{9}
$$

the nine column blocks from left to right as

$$
C_{1}, C_{2}, \ldots, C_{9}
$$

and the nine square blocks in row-major order as

$$
S_{1}, S_{2}, \ldots, S_{9}
$$

- We use $c_{i j}$ to denote the cell in $R_{i}$ and $C_{j}$.

## Rule 1

## Theorem (Rule 1)

Let c be an unfilled cell. If every number except $N$ appears in at least one block of $c$, then the solution to $c$ is $N$.

## Application of Rule 1

We will show, using Rule 1 , that cell $C_{58}$ is a 1 .

| 3 |  |  |  | 2 |  | 9 |  |  |
| :--- | :--- | :--- | :--- | :--- | :--- | :--- | :--- | :--- |
|  | 1 |  |  |  | 3 |  |  |  |
|  |  | 4 |  |  |  |  |  |  |
|  |  |  | 1 |  |  | 3 | 2 | 9 |
| 2 | 8 |  |  | 5 |  |  | 1 | 7 |
|  |  |  |  |  | 9 |  |  | 4 |
|  | 5 |  | 6 |  |  | 2 |  |  |
|  |  | 2 |  |  |  |  | 6 |  |
| 7 |  | 6 |  | 4 |  |  |  | 5 |

Figure: $\pi$-Sudoku

## Application of Rule 1

2, 3, 4, 7, 9 in $S_{6} ; 5,8$ in $R_{5} ; 6$ in $C_{8}$. So, $c_{58}$ is 1.

| 3 |  |  |  | 2 |  | 9 |  |  |
| :--- | :--- | :--- | :--- | :--- | :--- | :--- | :--- | :--- |
|  | 1 |  |  |  | 3 |  |  |  |
|  |  | 4 |  |  |  |  |  |  |
|  |  |  | 1 |  |  | 3 | 2 | 9 |
| 2 | 8 |  |  | 5 |  |  | 1 | 7 |
|  |  |  |  |  | 9 |  |  | 4 |
|  | 5 |  | 6 |  |  | 2 |  |  |
|  |  | 2 |  |  |  |  | 6 |  |
| 7 |  | 6 |  | 4 |  |  |  | 5 |

Figure: Partial Solution to $\pi$-Sudoku

## Another Application of Rule 1

We will show, using Rule 1, that cell $C_{57}$ is a 6 .

| 3 |  |  |  | 2 |  | 9 |  |  |
| :--- | :--- | :--- | :--- | :--- | :--- | :--- | :--- | :--- |
|  | 1 |  |  |  | 3 |  |  |  |
|  |  | 4 |  |  |  |  |  |  |
|  |  |  | 1 |  |  | 3 | 2 | 9 |
| 2 | 8 |  |  | 5 |  | 6 | 1 | 7 |
|  |  |  |  |  | 9 |  |  | 4 |
|  | 5 |  | 6 |  |  | 2 |  |  |
|  |  | 2 |  |  |  |  | 6 |  |
| 7 |  | 6 |  | 4 |  |  |  | 5 |

Figure: Partial Solution to $\pi$-Sudoku

## Another Application of Rule 1

1, 2, 3, 4, 7, 9 in $S_{6} ; 5,8$ in $R_{5} . S o, C_{57}$ is 6.

| 3 |  |  |  | 2 |  | 9 |  |  |
| :--- | :--- | :--- | :--- | :--- | :--- | :--- | :--- | :--- |
|  | 1 |  |  |  | 3 |  |  |  |
|  |  | 4 |  |  |  |  |  |  |
|  |  |  | 1 |  |  | 3 | 2 | 9 |
| 2 | 8 |  |  | 5 |  | 6 | 1 | 7 |
|  |  |  |  |  | 9 |  |  | 4 |
|  | 5 |  | 6 |  |  | 2 |  |  |
|  |  | 2 |  |  |  |  | 6 |  |
| 7 |  | 6 |  | 4 |  |  |  | 5 |

Figure: Partial Solution to $\pi$-Sudoku

## Rule 2

## Theorem (Rule 2)

Let c be an unfilled cell in a square block $S$ and let $N$ be a number that does not appear in any blocks containing c. If, in $S$, every unfilled cell other than c lies in a row block or a column block that contains $N$ implicitly or explicitly, then the solution to $c$ is $N$.

## Rule 2

## Theorem (Rule 2)

Let c be an unfilled cell in a square block $S$ and let $N$ be a number that does not appear in any blocks containing c. If, in $S$, every unfilled cell other than c lies in a row block or a column block that contains $N$ implicitly or explicitly, then the solution to $c$ is $N$.

- Note that a similar Rule 2 can be written for a row block $R$ or column block $C$.

## Application of Rule 2

We will show, using Rule 2 , that $c_{32}$ is 2 .

| 3 |  |  |  | 2 |  | 9 |  |  |
| :--- | :--- | :--- | :--- | :--- | :--- | :--- | :--- | :--- |
|  | 1 |  |  |  | 3 |  |  |  |
|  | 2 | 4 |  |  |  |  |  |  |
|  |  |  | 1 |  |  | 3 | 2 | 9 |
| 2 | 8 | 9 | 3 | 5 | 4 | 6 | 1 | 7 |
|  |  |  |  |  | 9 |  |  | 4 |
|  | 5 |  | 6 |  |  | 2 |  |  |
|  |  | 2 |  |  |  |  | 6 |  |
| 7 |  | 6 |  | 4 |  |  |  | 5 |

Figure: Partial Solution $\pi$-Sudoku

## Application of Rule 2

$S_{1}$ doesn't contain a 2. $c_{21}$ and $c_{31}$ in $C_{1}$ can't be 2. $c_{13}$ and $c_{23}$ in $C_{3}$ can't be 2. $c_{12}$ in $R_{1}$ can't be 2. So, $c_{32}$ is 2 .

| 3 |  |  |  | 2 |  | 9 |  |  |
| :--- | :--- | :--- | :--- | :--- | :--- | :--- | :--- | :--- |
|  | 1 |  |  |  | 3 |  |  |  |
|  | 2 | 4 |  |  |  |  |  |  |
|  |  |  | 1 |  |  | 3 | 2 | 9 |
| 2 | 8 | 9 | 3 | 5 | 4 | 6 | 1 | 7 |
|  |  |  |  |  | 9 |  |  | 4 |
|  | 5 |  | 6 |  |  | 2 |  |  |
|  |  | 2 |  |  |  |  | 6 |  |
| 7 |  | 6 |  | 4 |  |  |  | 5 |

Figure: Partial Solution $\pi$-Sudoku

## Another Application of Rule 2

Again, we will use Rule 2 to show that $c_{29}$ is 2.

| 3 |  |  |  | 2 |  | 9 |  |  |
| :--- | :--- | :--- | :--- | :--- | :--- | :--- | :--- | :--- |
|  | 1 |  |  |  | 3 |  |  | 2 |
|  | 2 | 4 |  |  |  |  |  |  |
|  |  |  | 1 |  |  | 3 | 2 | 9 |
| 2 | 8 | 9 | 3 | 5 | 4 | 6 | 1 | 7 |
|  |  |  |  |  | 9 |  |  | 4 |
|  | 5 |  | 6 |  |  | 2 |  |  |
|  |  | 2 |  |  |  |  | 6 |  |
| 7 |  | 6 |  | 4 |  |  |  | 5 |

Figure: Partial Solution to $\pi$-Sudoku

## Another Application of Rule 2

$S_{3}$ doesn't contain a 2. $c_{18}$ and $c_{19}$ in $R_{1}$ can't be 2. $c_{37}, c_{38}$, and $c_{39}$ in $R_{3}$ can't be 2. $c_{27}$ in $C_{7}$ can't be 2. And $c_{28}$ in $C_{8}$ can't be a 2. So, $c_{29}$ is 2.

| 3 |  |  |  | 2 |  | 9 |  |  |
| :--- | :--- | :--- | :--- | :--- | :--- | :--- | :--- | :--- |
|  | 1 |  |  |  | 3 |  |  | 2 |
|  | 2 | 4 |  |  |  |  |  |  |
|  |  |  | 1 |  |  | 3 | 2 | 9 |
| 2 | 8 | 9 | 3 | 5 | 4 | 6 | 1 | 7 |
|  |  |  |  |  | 9 |  |  | 4 |
|  | 5 |  | 6 |  |  | 2 |  |  |
|  |  | 2 |  |  |  |  | 6 |  |
| 7 |  | 6 |  | 4 |  |  |  | 5 |

## Partial Solution to $\pi$-Sudoku

Applying Rules 1 and 2 several times to the $\pi$-Sudoku, we reach the partially solved puzzle.

| 3 |  |  |  | 2 |  | 9 |  |  |
| :--- | :--- | :--- | :--- | :--- | :--- | :--- | :--- | :--- |
|  | 1 |  |  |  | 3 |  |  | 2 |
|  | 2 | 4 |  |  |  |  |  |  |
|  |  |  | 1 |  |  | 3 | 2 | 9 |
| 2 | 8 | 9 | 3 | 5 | 4 | 6 | 1 | 7 |
|  |  |  | 2 |  | 9 |  |  | 4 |
|  | 5 |  | 6 |  |  | 2 |  |  |
|  |  | 2 |  |  |  |  | 6 |  |
| 7 |  | 6 |  | 4 | 2 | 1 |  | 5 |

Niven Numbers and Sudoku Puzzles

## Pigeonhole Principle

- We obtain the following rule from the Pigeonhole Principle.

## Pigeonhole Principle

- We obtain the following rule from the Pigeonhole Principle.

## Theorem (Pigeonhole Principle)

Let $B$ be a block with $n$ unfilled cells, and let $N_{1}, N_{2}, \ldots, N_{m}$ be numbers that do not appear in $B$, where $m<n$. If these $m N_{i}$ 's are possible solutions only to certain $m$ cells in B, then these $N_{i}$ 's are the only possible solutions to these $m$ cells.

## Partial Solution to $\pi$-Sudoku

1 and 6 are not in $S_{3}$. 1 and 6 appear in $C_{7}$ and $C_{8}$. And $C_{29}$ is filled. So, by the Pigeonhole Principle, 1 and 6 are the only solutions to $c_{19}$ and $c_{39}$. So, $c_{38}$ is 3 .

| 3 |  |  |  | 2 |  | 9 |  | 61 |
| :--- | :--- | :--- | :--- | :--- | :--- | :--- | :--- | :--- | :--- |
|  | 1 |  |  |  | 3 |  |  | 2 |
|  | 2 | 4 |  |  |  |  | 3 | 61 |
|  |  |  | 1 |  |  | 3 | 2 | 9 |
| 2 | 8 | 9 | 3 | 5 | 4 | 6 | 1 | 7 |
|  |  |  | 2 |  | 9 |  |  | 4 |
|  | 5 |  | 6 |  |  | 2 |  |  |
|  |  | 2 |  |  |  |  | 6 |  |
| 7 |  | 6 |  | 4 | 2 | 1 |  | 5 |

## Partial Solution to $\pi$-Sudoku

Using several more applications of Rules 1 and 2, we are left with the following puzzle.

| 3 |  |  | 4 | 2 |  | 9 |  | 1 |
| :--- | :--- | :--- | :--- | :--- | :--- | :--- | :--- | :--- |
|  | 1 |  | 9 |  | 3 | 4 |  | 2 |
| 9 | 2 | 4 | 7 | 1 |  |  | 3 | 6 |
|  | 4 |  | 1 |  |  | 3 | 2 | 9 |
| 2 | 8 | 9 | 3 | 5 | 4 | 6 | 1 | 7 |
| 1 |  | 3 | 2 |  | 9 |  |  | 4 |
| 8 | 5 | 1 | 6 | 9 | 7 | 2 | 4 | 3 |
| 4 | 9 | 2 | 5 | 3 | 1 | 7 | 6 | 8 |
| 7 | 3 | 6 | 8 | 4 | 2 | 1 | 9 | 5 |

Figure: Partial Solution to $\pi$-Sudoku

## Another Pigeonhole Sudoku

|  | 5 | 9 |  |  | 8 | 4 |  |  |
| :--- | :--- | :--- | :--- | :--- | :--- | :--- | :--- | :--- |
|  | 1 |  |  | 6 |  |  | 3 |  |
|  | 6 |  | 4 | 3 | 7 |  |  |  |
|  | 4 |  |  |  |  |  | 6 |  |
|  |  |  |  |  |  | 9 | 1 | 8 |
|  |  | 8 |  | 2 |  |  |  |  |
|  |  |  |  |  |  | 6 |  |  |
|  |  | 5 |  |  |  |  | 8 | 7 |
|  |  |  |  | 7 | 6 |  | 5 |  |

Curtis Cooper University of Central Missouri
Niven Numbers and Sudoku Puzzles

## Another Pigeonhole Sudoku cont.

After using Rules 1 and 2 , we have the following partial solution.

| 3 | 5 | 9 | 2 | 1 | 8 | 4 | 7 | 6 |
| :--- | :--- | :--- | :--- | :--- | :--- | :--- | :--- | :--- |
|  | 1 |  |  | 6 |  | 8 | 3 | 2 |
| 8 | 6 | 2 | 4 | 3 | 7 | 5 | 9 | 1 |
|  | 4 |  |  |  |  | 2 | 6 |  |
|  |  | 6 |  | 5 | 4 | 9 | 1 | 8 |
|  |  | 8 | 6 | 2 |  | 7 | 4 |  |
|  |  |  |  |  |  | 6 | 2 |  |
| 6 |  | 5 |  | 4 | 2 |  | 8 | 7 |
|  |  |  |  | 7 | 6 |  | 5 |  |

## Applying Pigeonhole Principle

In $C_{2}, 3$ and 9 are the only solutions to $c_{62}$ and $c_{82}$. So, $c_{54}$ is 3 .

| 3 | 5 | 9 | 2 | 1 | 8 | 4 | 7 | 6 |
| :--- | :--- | :--- | :--- | :--- | :--- | :--- | :--- | :--- |
|  | 1 |  |  | 6 |  | 8 | 3 | 2 |
| 8 | 6 | 2 | 4 | 3 | 7 | 5 | 9 | 1 |
|  | 4 |  |  |  |  | 2 | 6 |  |
|  |  | 6 | 3 | 5 | 4 | 9 | 1 | 8 |
|  | 93 | 8 | 6 | 2 |  | 7 | 4 |  |
|  |  |  |  |  |  | 6 | 2 |  |
| 6 | 93 | 5 |  | 4 | 2 |  | 8 | 7 |
|  |  |  |  | 7 | 6 |  | 5 |  |

## Definition of Alternating Cycle-of- $N$

- We shall define several path-like structures.

## Definition of Alternating Cycle-of- $N$

- We shall define several path-like structures.
- First we consider the adjacency between two unfilled cells. If $N$ is a potential solution to $c_{i_{1} j_{1}}$ and $c_{i_{2} j_{2}}$ that are in the same block, then we say these two cells are adjacent and we write $c_{i_{1} j_{1}} \leftrightarrow c_{i_{2} j_{2}}$.

## Definition of Alternating Cycle-of- $N$

- We shall define several path-like structures.
- First we consider the adjacency between two unfilled cells. If $N$ is a potential solution to $c_{i_{1} j_{1}}$ and $c_{i_{2} j_{2}}$ that are in the same block, then we say these two cells are adjacent and we write $c_{i_{1} j_{1}} \leftrightarrow c_{i_{2} j_{2}}$.
- Furthermore, if $N$ is a potential solution only to these two cells in the block, we call them 2-adjacent and, when it becomes necessary, we write $c_{i_{1} j_{1}} \Leftrightarrow c_{i_{2} j_{2}}$.

## Definition of Alternating Cycle-of- $N$

- Assume that $N$ is a potential solution to $m$ cells $c_{i_{1} j_{1}}, c_{i_{2} j_{2}}$, $\ldots, c_{i_{m j_{m}}}$. If cells $c_{i_{t} j_{t}}$ and $c_{i_{t+1} j_{t+1}}$ are adjacent for $1 \leq t \leq m-1$, then the $m$ cells form a walk-of- $N$ of length $m-1$.

## Definition of Alternating Cycle-of- $N$

- Assume that $N$ is a potential solution to $m$ cells $c_{i_{1} j_{1}}, c_{i_{2} j_{2}}$, $\ldots, c_{i_{m j_{m}}}$. If cells $c_{i_{t} j_{t}}$ and $c_{i_{t+1} j_{t+1}}$ are adjacent for $1 \leq t \leq m-1$, then the $m$ cells form a walk-of- $N$ of length $m-1$.
- We use $c_{i_{1} j_{1}} \leftrightarrow c_{i_{2} j_{2}} \leftrightarrow \cdots \leftrightarrow c_{i_{m} j_{m}}$ to denote this walk.

## Definition of Alternating Cycle-of- $N$

- Assume that $N$ is a potential solution to $m$ cells $c_{i_{1} j_{1}}, c_{i_{2} j_{2}}$, $\ldots, c_{i_{m j_{m}}}$. If cells $c_{i_{i} j_{t}}$ and $c_{i_{t+1} j_{t+1}}$ are adjacent for $1 \leq t \leq m-1$, then the $m$ cells form a walk-of- $N$ of length $m-1$.
- We use $c_{i_{1} j_{1}} \leftrightarrow c_{i_{2} j_{2}} \leftrightarrow \cdots \leftrightarrow c_{i_{m} j_{m}}$ to denote this walk.
- Again, we may use " $\Leftrightarrow$ " instead of " $\leftrightarrow$ " when it is applicable and necessary. A walk-of- $N$ is closed if the "first" cell and the "last" cell are identical. A path-of- $N$ is a walk-of- $N$ with no repeated cells. A cycle-of- $N$ is a closed walk-of- $N$ in which there are no repeated cells.

## Definition of Alternating Cycle-of- $N$

- Now, let $c_{i_{1} j_{1}} \leftrightarrow c_{i_{2} j_{2}} \leftrightarrow \cdots \leftrightarrow c_{i_{m} j_{m}} \leftrightarrow c_{i_{1} j_{1}}$ be an cycle-of- $N$ of length $m \geq 5$.

## Definition of Alternating Cycle-of- $N$

- Now, let $c_{i_{1} j_{1}} \leftrightarrow c_{i_{2} j_{2}} \leftrightarrow \cdots \leftrightarrow c_{i_{m} j_{m}} \leftrightarrow c_{i_{1} j_{1}}$ be an cycle-of- $N$ of length $m \geq 5$.
- If $c_{i_{2} j_{2 t}} \Leftrightarrow c_{i_{2 t+1} j_{2 t+1}}$, then we call this cycle-of- $N$ an alternating cycle-of- $N$. Namely, every other adjacency is definitely a 2-adjacency starting from the second one:

$$
c_{i_{2} j_{2}} \Leftrightarrow c_{i_{3} j_{3}}, c_{i_{4} j_{4}} \Leftrightarrow c_{i_{5 j} j_{5}}, \ldots
$$

## Definition of Alternating Cycle-of- $N$

- Now, let $c_{i_{1} j_{1}} \leftrightarrow c_{i_{2} j_{2}} \leftrightarrow \cdots \leftrightarrow c_{i_{m} j_{m}} \leftrightarrow c_{i_{1} j_{1}}$ be an cycle-of- $N$ of length $m \geq 5$.
- If $c_{i_{2}+j_{2 t}} \Leftrightarrow c_{i_{2 t+1} j_{2 t+1}}$, then we call this cycle-of- $N$ an alternating cycle-of- $N$. Namely, every other adjacency is definitely a 2-adjacency starting from the second one:
$c_{i_{2} j_{2}} \Leftrightarrow c_{i_{3} j_{3}}, c_{i_{4} j_{4}} \Leftrightarrow c_{i_{5} j_{5}}, \ldots$.
- Note if the length $m$ is odd, the first and the last adjacency do not need to be a 2-adjacency. We call $c_{i_{1} j_{1}}$ the pivot cell. The following theorem provides a tool in solving more difficult Sudoku puzzles.

## Alternating Cycle-of-N Rule

## Theorem (Alternating Cycle-of- $N$ )

If an alternating cycle-of-N of odd length is formed when solving a Sudoku puzzle, then $N$ is not the solution to the pivot cell.

## Alternating Cycle-of-N Rule

## Theorem (Alternating Cycle-of-N)

If an alternating cycle-of-N of odd length is formed when solving a Sudoku puzzle, then $N$ is not the solution to the pivot cell.

We will not prove this theorem here. However, we will apply it to our partial solution to the $\pi$-Sudoku puzzle.

## Partial Solution to $\pi$-Sudoku

Again, here is our partial solution to the $\pi$-Sudoku puzzle.

| 3 |  |  | 4 | 2 |  | 9 |  | 1 |
| :--- | :--- | :--- | :--- | :--- | :--- | :--- | :--- | :--- | :--- |
|  | 1 |  | 9 |  | 3 | 4 |  | 2 |
| 9 | 2 | 4 | 7 | 1 |  |  | 3 | 6 |
|  | 4 |  | 1 |  |  | 3 | 2 | 9 |
| 2 | 8 | 9 | 3 | 5 | 4 | 6 | 1 | 7 |
| 1 |  | 3 | 2 |  | 9 |  |  | 4 |
| 8 | 5 | 1 | 6 | 9 | 7 | 2 | 4 | 3 |
| 4 | 9 | 2 | 5 | 3 | 1 | 7 | 6 | 8 |
| 7 | 3 | 6 | 8 | 4 | 2 | 1 | 9 | 5 |

Figure: Partial Solution to $\pi$-Sudoku

## Alternating Cycle-of-6

6 is a possible solution to $c_{12}, c_{16}, c_{46}, c_{41}$, and $c_{21}$. We denote this using a 6+.

| 3 | $6+$ |  | 4 | 2 | $6+$ | 9 |  | 1 |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |
| $6+$ | 1 |  | 9 |  | 3 | 4 |  | 2 |
| 9 | 2 | 4 | 7 | 1 |  |  | 3 | 6 |
| $6+$ | 4 |  | 1 |  | $6+$ | 3 | 2 | 9 |
| 2 | 8 | 9 | 3 | 5 | 4 | 6 | 1 | 7 |
| 1 |  | 3 | 2 |  | 9 |  |  | 4 |
| 8 | 5 | 1 | 6 | 9 | 7 | 2 | 4 | 3 |
| 4 | 9 | 2 | 5 | 3 | 1 | 7 | 6 | 8 |
| 7 | 3 | 6 | 8 | 4 | 2 | 1 | 9 | 5 |

Figure: Partial Solution to $\pi$-Sudoku

## Alternating Cycle-of-6

$$
c_{12} \leftrightarrow c_{16} \Leftrightarrow c_{46} \leftrightarrow c_{41} \Leftrightarrow c_{21} \leftrightarrow c_{12} .
$$

is an alternating cycle-of-6 of length five. $c_{12}$ is the pivot cell.

| 3 | $6+$ |  | 4 | 2 | $6+$ | 9 |  | 1 |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |
| $6+$ | 1 |  | 9 |  | 3 | 4 |  | 2 |
| 9 | 2 | 4 | 7 | 1 |  |  | 3 | 6 |
| $6+$ | 4 |  | 1 |  | $6+$ | 3 | 2 | 9 |
| 2 | 8 | 9 | 3 | 5 | 4 | 6 | 1 | 7 |
| 1 |  | 3 | 2 |  | 9 |  |  | 4 |
| 8 | 5 | 1 | 6 | 9 | 7 | 2 | 4 | 3 |
| 4 | 9 | 2 | 5 | 3 | 1 | 7 | 6 | 8 |
| 7 | 3 | 6 | 8 | 4 | 2 | 1 | 9 | 5 |

## Application of Alternating-Cycle-of-6

By the alternating cycle-of- 6 rule, number 6 is not a solution to cell $c_{12}$. So, $c_{12}$ is 7 .

| 3 | 7 |  | 4 | 2 | $6+$ | 9 |  | 1 |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |
| $6+$ | 1 |  | 9 |  | 3 | 4 |  | 2 |
| 9 | 2 | 4 | 7 | 1 |  |  | 3 | 6 |
| $6+$ | 4 |  | 1 |  | $6+$ | 3 | 2 | 9 |
| 2 | 8 | 9 | 3 | 5 | 4 | 6 | 1 | 7 |
| 1 |  | 3 | 2 |  | 9 |  |  | 4 |
| 8 | 5 | 1 | 6 | 9 | 7 | 2 | 4 | 3 |
| 4 | 9 | 2 | 5 | 3 | 1 | 7 | 6 | 8 |
| 7 | 3 | 6 | 8 | 4 | 2 | 1 | 9 | 5 |

Figure: Partial Solution to $\pi$-Sudoku

## Solution to $\pi$-Sudoku

We can finish the solution to the Sudoku puzzle by using Rule 1 several times.

| 3 | 7 | 8 | 4 | 2 | 6 | 9 | 5 | 1 |
| :--- | :--- | :--- | :--- | :--- | :--- | :--- | :--- | :--- |
| 6 | 1 | 5 | 9 | 8 | 3 | 4 | 7 | 2 |
| 9 | 2 | 4 | 7 | 1 | 5 | 8 | 3 | 6 |
| 5 | 4 | 7 | 1 | 6 | 8 | 3 | 2 | 9 |
| 2 | 8 | 9 | 3 | 5 | 4 | 6 | 1 | 7 |
| 1 | 6 | 3 | 2 | 7 | 9 | 5 | 8 | 4 |
| 8 | 5 | 1 | 6 | 9 | 7 | 2 | 4 | 3 |
| 4 | 9 | 2 | 5 | 3 | 1 | 7 | 6 | 8 |
| 7 | 3 | 6 | 8 | 4 | 2 | 1 | 9 | 5 |

Figure: Solution to $\pi$-Sudoku

## Another Alternating Cycle Sudoku

|  |  |  | 9 |  |  |  |  |  |
| :--- | :--- | :--- | :--- | :--- | :--- | :--- | :--- | :--- |
| 1 | 6 | 9 |  |  | 2 |  |  |  |
|  |  | 7 |  |  |  |  | 3 |  |
|  |  |  |  |  | 7 |  |  |  |
| 2 |  |  |  | 4 |  |  |  | 8 |
|  |  |  |  | 3 |  |  | 7 |  |
| 8 |  |  |  |  |  |  |  |  |
|  | 4 |  |  | 6 |  |  |  | 7 |
|  |  | 1 |  | 5 | 3 |  | 4 | 2 |

## Another Alternating Cycle Sudoku cont.

After using Rules 1 and 2 , we have the following partial solution.

| 4 |  |  | 9 | 7 | 5 |  |  | 6 |
| :--- | :--- | :--- | :--- | :--- | :--- | :--- | :--- | :--- |
| 1 | 6 | 9 | 3 | 8 | 2 | 7 | 5 | 4 |
| 5 |  | 7 | 4 | 1 | 6 |  | 3 | 9 |
|  |  |  |  |  | 7 |  |  |  |
| 2 | 7 |  |  | 4 |  |  |  | 8 |
|  |  |  |  | 3 | 8 |  | 7 |  |
| 8 |  | 6 | 7 |  | 4 |  |  |  |
| 3 | 4 |  |  | 6 |  |  |  | 7 |
| 7 | 9 | 1 | 8 | 5 | 3 | 6 | 4 | 2 |

## Alternating Cycle-of-2

2 is a possible solution to $c_{13}, c_{18}, c_{48}, c_{45}, c_{75}, c_{72}$, and $c_{83}$. We denote this by $2+$.

| 4 |  | $2^{2+}$ | 9 | 7 | 5 |  | $2+$ | 6 |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |
| 1 | 6 | 9 | 3 | 8 | 2 | 7 | 5 | 4 |
| 5 |  | 7 | 4 | 1 | 6 |  | 3 | 9 |
|  |  |  |  | $2+$ | 7 |  | $2+$ |  |
| 2 | 7 |  |  | 4 |  |  |  | 8 |
|  |  |  |  | 3 | 8 |  | 7 |  |
| 8 | $2+$ | 6 | 7 | $2+$ | 4 |  |  |  |
| 3 | 4 | $2+$ |  | 6 |  |  |  | 7 |
| 7 | 9 | 1 | 8 | 5 | 3 | 6 | 4 | 2 |

## Alternating Cycle-of-2

$$
c_{13} \leftrightarrow c_{18} \Leftrightarrow c_{48} \leftrightarrow c_{45} \Leftrightarrow c_{75} \leftrightarrow c_{72} \Leftrightarrow c_{83} \leftrightarrow c_{13} .
$$

is an alternating cycle-of-2 of length seven. $c_{13}$ is the pivot cell.

| 4 |  | $2+$ | 9 | 7 | 5 |  | $2+$ | 6 |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |
| 1 | 6 | 9 | 3 | 8 | 2 | 7 | 5 | 4 |
| 5 |  | 7 | 4 | 1 | 6 |  | 3 | 9 |
|  |  |  |  | $2+$ | 7 |  | $2+$ |  |
| 2 | 7 |  |  | 4 |  |  |  | 8 |
|  |  |  |  | 3 | 8 |  | 7 |  |
| 8 | $2+$ | 6 | 7 | $2+$ | 4 |  |  |  |
| 3 | 4 | $2+$ |  | 6 |  |  |  | 7 |
| 7 | 9 | 1 | 8 | 5 | 3 | 6 | 4 | 2 |

## Applying Alternating Cycle-of-2

By the alternating cycle-of-2 rule, number 2 is not a solution to cell $c_{13}$. So, $c_{83}$ is 2 .

| 4 |  | ${ }^{2+}$ | 9 | 7 | 5 |  | $2+$ | 6 |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |
| 1 | 6 | 9 | 3 | 8 | 2 | 7 | 5 | 4 |
| 5 |  | 7 | 4 | 1 | 6 |  | 3 | 9 |
|  |  |  |  | $2+$ | 7 |  | $(2+$ |  |
| 2 | 7 |  |  | 4 |  |  |  | 8 |
|  |  |  |  | 3 | 8 |  | 7 |  |
| 8 | $2+$ | 6 | 7 | $2+$ | 4 |  |  |  |
| 3 | 4 | $2+$ |  | 6 |  |  |  | 7 |
| 7 | 9 | 1 | 8 | 5 | 3 | 6 | 4 | 2 |

## Second $\pi$-Sudoku

Here are two other Sudoku puzzles. Both of these Sudoku puzzles can be solved using the alternating cycle rule.

| 3 |  |  |  | 4 |  |  | 2 |  |
| :--- | :--- | :--- | :--- | :--- | :--- | :--- | :--- | :--- |
|  | 1 |  |  | 9 | 2 | 8 |  | 3 |
|  |  | 4 |  |  |  |  |  | 6 |
|  |  |  | 1 |  |  |  | 5 |  |
| 9 |  |  |  | 5 |  |  |  | 8 |
|  | 6 |  |  |  | 9 |  |  |  |
|  |  |  |  |  |  | 2 |  |  |
| 1 |  |  | 5 |  |  |  | 6 |  |
| 2 |  | 9 |  | 7 | 8 |  |  | 5 |

Figure: Second $\pi$-Sudoku

## Third $\pi$-Sudoku

| 3 |  |  | 6 |  |  | 7 | 2 |  |
| :--- | :--- | :--- | :--- | :--- | :--- | :--- | :--- | :--- |
|  | 1 |  |  | 8 |  |  |  |  |
|  |  | 4 |  |  |  |  | 9 |  |
| 6 |  |  | 1 |  |  | 4 |  |  |
|  |  |  |  | 5 |  |  |  |  |
|  | 2 | 5 |  |  | 9 |  |  | 6 |
|  |  |  |  |  |  | 2 |  |  |
| 4 | 9 | 7 |  |  |  |  | 6 |  |
|  | 6 |  | 7 |  |  |  |  | 5 |
