\end{equation*}
$$

## Recently, Hirschhorn gave some simple proofs of these statements.

Curtis Cooper University of Central Missouri
Algebraic Statements Similar to Those in Ramanujan's "Lost Notebook"

## Recently, Hirschhorn gave some simple proofs of these statements.

One technique he used and we will use throughout the paper is componendo et dividendo, which states that

$$
\frac{a+b}{a-b}=\frac{c+d}{c-d} \text { if and only if } \frac{a}{b}=\frac{c}{d} .
$$

## Recently, Hirschhorn gave some simple proofs of these statements.

One technique he used and we will use throughout the paper is componendo et dividendo, which states that

$$
\frac{a+b}{a-b}=\frac{c+d}{c-d} \text { if and only if } \frac{a}{b}=\frac{c}{d} \text {. }
$$

We will give some similar algebraic statements to Ramanujan's statements and provide some proofs.

## Outline

Introduction(2) First Algebraic Statement
(3) Second Algebraic Statement

4 Third Algebraic StatementSecond and Third Algebraic StatementsFourth Algebraic StatementFifth Algebraic StatementSixth Algehraic StatementMore Algebraic Statement

Curtis Cooper University of Central Missouri
Algebraic Statements Similar to Those in Ramanujan's "Lost Notebook"

Here is Ramanujan's algebraic statement (1).
If $g^{5}=3$, then

$$
\frac{\sqrt{g^{2}+1}+\sqrt{5 g-5}}{\sqrt{g^{2}+1}-\sqrt{5 g-5}}=\frac{1}{g}+g+g^{2}+g^{3}
$$

Here is Ramanujan's algebraic statement (1).
If $g^{5}=3$, then

$$
\frac{\sqrt{g^{2}+1}+\sqrt{5 g-5}}{\sqrt{g^{2}+1}-\sqrt{5 g-5}}=\frac{1}{g}+g+g^{2}+g^{3}
$$

Here is a similar statement.

## Theorem

If $g^{5}=2$, then

$$
\frac{\sqrt{4 g^{2}+g+2}+\sqrt{8 g^{2}+41 g-54}}{\sqrt{4 g^{2}+g+2}-\sqrt{8 g^{2}+41 g-54}}=\frac{1}{g}+g+g^{2}+g^{3} .
$$

## Theorem

$$
\text { If } g^{5}=2, \text { then }
$$

$$
\frac{\sqrt{4 g^{2}+g+2}+\sqrt{8 g^{2}+41 g-54}}{\sqrt{4 g^{2}+g+2}-\sqrt{8 g^{2}+41 g-54}}=\frac{1}{g}+g+g^{2}+g^{3} .
$$

## Theorem

If $g^{5}=2$, then

$$
\frac{\sqrt{4 g^{2}+g+2}+\sqrt{8 g^{2}+41 g-54}}{\sqrt{4 g^{2}+g+2}-\sqrt{8 g^{2}+41 g-54}}=\frac{1}{g}+g+g^{2}+g^{3} .
$$

## Proof.

The algebraic statement is equivalent to

$$
\frac{\sqrt{4 g^{2}+g+2}+\sqrt{8 g^{2}+41 g-54}}{\sqrt{4 g^{2}+g+2}-\sqrt{8 g^{2}+41 g-54}}=\frac{1+g^{2}+g^{3}+g^{4}}{g}
$$

## Theorem

If $g^{5}=2$, then

$$
\frac{\sqrt{4 g^{2}+g+2}+\sqrt{8 g^{2}+41 g-54}}{\sqrt{4 g^{2}+g+2}-\sqrt{8 g^{2}+41 g-54}}=\frac{1}{g}+g+g^{2}+g^{3} .
$$

## Proof.

The algebraic statement is equivalent to

$$
\frac{\sqrt{4 g^{2}+g+2}+\sqrt{8 g^{2}+41 g-54}}{\sqrt{4 g^{2}+g+2}-\sqrt{8 g^{2}+41 g-54}}=\frac{1+g^{2}+g^{3}+g^{4}}{g} .
$$

Thus, by componendo et dividendo, we need to show that

$$
\sqrt{\frac{4 g^{2}+g+2}{8 g^{2}+41 g-54}}=\frac{1+g+g^{2}+g^{3}+g^{4}}{1-g+g^{2}+g^{3}+g^{4}}
$$

This is equivalent to showing that

$$
\begin{aligned}
& \left(1+g+g^{2}+g^{3}+g^{4}\right)^{2}\left(8 g^{2}+41 g-54\right) \\
& \quad=\left(1-g+g^{2}+g^{3}+g^{4}\right)^{2}\left(4 g^{2}+g+2\right)
\end{aligned}
$$

Curtis Cooper University of Central Missouri
Algebraic Statements Similar to Those in Ramanujan's "Lost Notebook"

This is equivalent to showing that

$$
\begin{aligned}
& \left(1+g+g^{2}+g^{3}+g^{4}\right)^{2}\left(8 g^{2}+41 g-54\right) \\
& \quad=\left(1-g+g^{2}+g^{3}+g^{4}\right)^{2}\left(4 g^{2}+g+2\right) .
\end{aligned}
$$

Expanding both sides of the above equation and using the fact that $g^{5}=2$, the left- and right-hand sides of the equation are equal and the theorem is proved.

## Outline

IntroductionFirst Algebraic Statement
## 3 Second Algebraic Statement

Third Algebraic StatementSecond and Third Algebraic StatementsFourth Algehraic StatementFifth Algebraic StatementSixth Algebraic StatementMore Algebraic StatementCurtis Cooper University of Central Missouri
Algebraic Statements Similar to Those in Ramanujan's "Lost Notebook"

Here is Ramanujan's algebraic statement (2).
If $g^{5}=2$, then

$$
\sqrt{1+g^{2}}=\frac{g^{4}+g^{3}+g-1}{\sqrt{5}}
$$

Here is Ramanujan's algebraic statement (2).
If $g^{5}=2$, then

$$
\sqrt{1+g^{2}}=\frac{g^{4}+g^{3}+g-1}{\sqrt{5}}
$$

Here is a similar statement.

## Theorem

If $g^{5}=8$, then

$$
\sqrt{2 g^{2}-3}=\frac{g^{4}+2 g^{3}-2 g^{2}-2}{2 \sqrt{5}}
$$

## Theorem

If $g^{5}=8$, then

$$
\sqrt{2 g^{2}-3}=\frac{g^{4}+2 g^{3}-2 g^{2}-2}{2 \sqrt{5}} .
$$

Curtis Cooper University of Central Missouri
Algebraic Statements Similar to Those in Ramanujan's "Lost Notebook"

## Theorem

If $g^{5}=8$, then

$$
\sqrt{2 g^{2}-3}=\frac{g^{4}+2 g^{3}-2 g^{2}-2}{2 \sqrt{5}} .
$$

## Proof.

Using the fact that $g^{5}=8$, we have the following equalities.

$$
\begin{aligned}
\left(g^{4}+2 g^{3}-2 g^{2}-2\right)^{2} & =g^{8}+4 g^{7}-8 g^{5}-8 g^{3}+8 g^{2}+4 \\
& =8 g^{3}+32 g^{2}-64-8 g^{3}+8 g^{2}+4 \\
& =40 g^{2}-60=20\left(2 g^{2}-3\right) .
\end{aligned}
$$

## Theorem

If $g^{5}=8$, then

$$
\sqrt{2 g^{2}-3}=\frac{g^{4}+2 g^{3}-2 g^{2}-2}{2 \sqrt{5}}
$$

## Proof.

Using the fact that $g^{5}=8$, we have the following equalities.

$$
\begin{aligned}
\left(g^{4}+2 g^{3}-2 g^{2}-2\right)^{2} & =g^{8}+4 g^{7}-8 g^{5}-8 g^{3}+8 g^{2}+4 \\
& =8 g^{3}+32 g^{2}-64-8 g^{3}+8 g^{2}+4 \\
& =40 g^{2}-60=20\left(2 g^{2}-3\right)
\end{aligned}
$$

This proves the theorem.

To find some more algebraic identities similar to (2), we used a C++ program to search for solutions to

$$
\left(R+S g+T g^{2}+U g^{3}+V g^{4}\right)^{2}=C g^{2}+E
$$

where $g^{5}=h+1$.

To find some more algebraic identities similar to (2), we used a C++ program to search for solutions to

$$
\left(R+S g+T g^{2}+U g^{3}+V g^{4}\right)^{2}=C g^{2}+E
$$

where $g^{5}=h+1$.
Here is the C++ program.

## \#include <iostream> \#include <fstream>

using namespace std;
// This program searches for integers $R, S, T$, // U, V, and h
// such that if $g^{\wedge} 5=h+1$, then
// $\left(R+S g+T g^{\wedge} 2+U g^{\wedge} 3+V g^{\wedge} 4\right)^{\wedge} 2=C g^{\wedge} 2+E$
// Bounds for $R, S, T, U, V$, and $h$
// will be input from the keyboard.

IntroductionFirst Algebraic StatementSecond Algebraic StatementThird Algebraic StatementSecond and Third Algebraic StatementsFourth Algebraic StatementFifth Algebraic Statement(8) Sixth Algebraic StatementMore Algebraic Statement

Curtis Cooper University of Central Missouri
Algebraic Statements Similar to Those in Ramanujan's "Lost Notebook"

We next set out to find algebraic statements similar to (6). If $g^{4}=5$, then

$$
\frac{\sqrt[5]{3+2 g}-\sqrt[5]{4-4 g}}{\sqrt[5]{3+2 g}+\sqrt[5]{4-4 g}}=2+g+g^{2}+g^{3}
$$

We next set out to find algebraic statements similar to (6).
If $g^{4}=5$, then

$$
\frac{\sqrt[5]{3+2 g}-\sqrt[5]{4-4 g}}{\sqrt[5]{3+2 g}+\sqrt[5]{4-4 g}}=2+g+g^{2}+g^{3}
$$

To construct such a result, we want to find integers $h, A, B, C$, $D$, and $E$ so that if $g^{4}=h+1$, then

$$
\sqrt[5]{\frac{A g+B}{C g+D}}=\frac{E+1+g+g^{2}+g^{3}}{1+g+g^{2}+g^{3}}
$$

We next set out to find algebraic statements similar to (6).
If $g^{4}=5$, then

$$
\frac{\sqrt[5]{3+2 g}-\sqrt[5]{4-4 g}}{\sqrt[5]{3+2 g}+\sqrt[5]{4-4 g}}=2+g+g^{2}+g^{3}
$$

To construct such a result, we want to find integers $h, A, B, C$, $D$, and $E$ so that if $g^{4}=h+1$, then

$$
\sqrt[5]{\frac{A g+B}{C g+D}}=\frac{E+1+g+g^{2}+g^{3}}{1+g+g^{2}+g^{3}} .
$$

We found the following solutions.

| $C$ | $D$ | $E$ | $h$ | $A$ | $B$ |
| :---: | :---: | :---: | :---: | :---: | :---: |
| 4 | -4 | 2 | 4 | 2 | 3 |
| 1 | 2 | -79 | 79 | 512 | -1536 |
| 4 | 12 | -202 | 404 | 486 | -2187 |

## The first line is Ramanujan's (6). Here are the other theorems.

## Theorem

If $g^{4}=80$, then

$$
\frac{\sqrt[5]{512 g-1536}+\sqrt[5]{g+2}}{\sqrt[5]{512 g-1536}-\sqrt[5]{g+2}}=\frac{-77+2 g+2 g^{2}+2 g^{3}}{-79}
$$

The first line is Ramanujan's (6). Here are the other theorems.

## Theorem

If $g^{4}=80$, then

$$
\frac{\sqrt[5]{512 g-1536}+\sqrt[5]{g+2}}{\sqrt[5]{512 g-1536}-\sqrt[5]{g+2}}=\frac{-77+2 g+2 g^{2}+2 g^{3}}{-79}
$$

## Theorem

If $g^{4}=405$, then

$$
\frac{\sqrt[5]{486 g-2187}+\sqrt[5]{4 g+12}}{\sqrt[5]{486 g-2187}-\sqrt[5]{4 g+12}}=\frac{-200+2 g+2 g^{2}+2 g^{3}}{-202}
$$

# We next state some theorems similar to some of Ramanujan's algebraic statements. 

Curtis Cooper University of Central Missouri
Algebraic Statements Similar to Those in Ramanujan's "Lost Notebook"

We next state some theorems similar to some of Ramanujan's algebraic statements.

## Theorem

If $g^{3}=2$, then

$$
\frac{\sqrt[4]{111-87 g}+\sqrt[4]{g-1}}{\sqrt[4]{111-87 g}-\sqrt[4]{g-1}}=2+g+g^{2}
$$

## We next give another algebraic statement theorem and proof.

We next give another algebraic statement theorem and proof.

## Theorem

If $g^{5}=4$, then

$$
\frac{3 \sqrt{3 g^{2}+4 g+6}+\sqrt{55 g^{2}+40 g-50}}{3 \sqrt{3 g^{2}+4 g+6}-\sqrt{55 g^{2}+40 g-50}}=\frac{2+2 g+g^{2}+2 g^{3}+2 g^{4}}{g^{2}}
$$

## Here is another algebraic statement.

Curtis Cooper University of Central Missouri
Algebraic Statements Similar to Those in Ramanujan's "Lost Notebook"

Here is another algebraic statement.

## Theorem

If $g^{5}=2$, then

$$
\frac{\sqrt[3]{5 g^{2}+1}+\sqrt[3]{35 g^{2}+g-43}}{\sqrt[3]{5 g^{2}+1}-\sqrt[3]{35 g^{2}+g-43}}=\frac{2+g+2 g^{2}+2 g^{3}+2 g^{4}}{g}
$$

## Here is another algebraic statement.

Curtis Cooper University of Central Missouri
Algebraic Statements Similar to Those in Ramanujan's "Lost Notebook"

Here is another algebraic statement.

## Theorem

If $g^{7}=2$, then

$$
\begin{aligned}
& \frac{\sqrt[5]{12+15 g+11 g^{2}+15 g^{3}}+\sqrt[5]{14+315 g+346 g^{2}-259 g^{3}-270 g^{4}}}{\sqrt[5]{12+15 g+11 g^{2}+15 g^{3}}-\sqrt[5]{14+315 g+346 g^{2}-259 g^{3}-270 g^{4}}} \\
& \quad=\frac{2+g+2 g^{2}+2 g^{3}+2 g^{4}+2 g^{5}+2 g^{6}}{g}
\end{aligned}
$$

Here is another algebraic statement.

## Theorem

If $g^{7}=2$, then

$$
\begin{aligned}
& \frac{\sqrt[5]{12+15 g+11 g^{2}+15 g^{3}}+\sqrt[5]{14+315 g+346 g^{2}-259 g^{3}-270 g^{4}}}{\sqrt[5]{12+15 g+11 g^{2}+15 g^{3}}-\sqrt[5]{14+315 g+346 g^{2}-259 g^{3}-270 g^{4}}} \\
& \quad=\frac{2+g+2 g^{2}+2 g^{3}+2 g^{4}+2 g^{5}+2 g^{6}}{g}
\end{aligned}
$$

One open question is the following.
Can we generate theorems with the hypothesis that $g^{k}=2$, where $k \geq 9$ is an odd integer?

Here are some other theorems.
Theorem

$$
\text { If } 2 g^{3}-3 g^{2}-4=0, \text { then }
$$

$$
\frac{\sqrt{121 g^{2}+998 g+121}+5 g-5}{\sqrt{121 g^{2}+998 g+121}-5 g+5}=\frac{16+4 g+8 g^{2}}{14+8 g^{2}}
$$

Here are some other theorems.

## Theorem

$$
\text { If } 2 g^{3}-3 g^{2}-4=0 \text {, then }
$$

$$
\frac{\sqrt{121 g^{2}+998 g+121}+5 g-5}{\sqrt{121 g^{2}+998 g+121}-5 g+5}=\frac{16+4 g+8 g^{2}}{14+8 g^{2}} .
$$

## Theorem

$$
\text { If } 2 g^{3}-3 g^{2}+2=0 \text {, then }
$$

$$
\frac{\sqrt{1681 g^{2}-1882 g+1681}-g+1}{\sqrt{1681 g^{2}-1882 g+1681}+g-1}=\frac{202+144 g-200 g^{2}}{200+140 g-200 g^{2}} .
$$

Here are some other theorems.

## Theorem

$$
\text { If } 2 g^{3}-3 g^{2}-4=0, \text { then }
$$

$$
\frac{\sqrt{121 g^{2}+998 g+121}+5 g-5}{\sqrt{121 g^{2}+998 g+121}-5 g+5}=\frac{16+4 g+8 g^{2}}{14+8 g^{2}}
$$

## Theorem

$$
\text { If } 2 g^{3}-3 g^{2}+2=0, \text { then }
$$

$$
\frac{\sqrt{1681 g^{2}-1882 g+1681}-g+1}{\sqrt{1681 g^{2}-1882 g+1681}+g-1}=\frac{202+144 g-200 g^{2}}{200+140 g-200 g^{2}}
$$

Can we generate other similar theorems?
